

CS3383, Winter 2019 Assignment # 1

Rasoul Shahrivar

Faculty of Computer Science, UNB

Due time: Wednesday, Jan/16/2019, 9:20 a.m

Student's full name: Student ID:.....

Note:

- Since the solutions of this assignment will be reviewed in the tutorial on Wednesday (Jan/16 at 9:30 am), no submission after the due time will be accepted.
 - The full credit will be given only for correct solutions that are described clearly.
-

Question 1: (6 marks) Consider the given functions below. Sort all of them using the asymptotic order (big-O). Provide short explanation for your answer.

- $3 \log n$
- $3 \log \log n$
- $n^{\log n}$
- 5^n
- $n^{n^{1/4}}$
- $\left(\frac{n}{4}\right)^{n/4}$

Question 2: (4 marks) Among the following given functions, which one(s) is (are) representing the time complexity of a sub-quadratic algorithm. Explain your answer, and give a polynomial as an example for each part.

- $O(n^{\frac{3}{2}})$
- $\Omega(n^{\frac{3}{2}})$
- $n^{O(\frac{3}{2})}$
- $n^{\Omega(\frac{3}{2})}$

Question 3: (5 marks) (From the DPU textbook, Exercise 1.4) Show that

$$\log(n!) = \Theta(n \log n).$$

(Hint: To show an upper bound, compare $n!$ with n^n . To show a lower bound, compare it with $(n/2)^{n/2}$.)

Question 4: (10 marks) Asymptotically analyze the running time of the following algorithm.

Algorithm *Intervals*(A, n):

Input: array A of n positive integers, indexed from 1, and its size n .

```
   $Y \leftarrow 0$ 
  for  $i$  from 1 to  $n$ 
    for  $j$  from  $i$  to  $n$ 
       $X \leftarrow 0$ 
      for  $k$  from 1 to  $j$ 
         $X \leftarrow X + A[k]$ 
        for  $h$  from  $k$  to  $i$ 
           $X \leftarrow X \cdot A[h]$ 
       $Y \leftarrow Y + X$ 
  return  $Y$ 
```
